

Emergency Turn Off:

The main or master valve for the Lawn Sprinkler System is typically in the basement on a tee after the water meter, or if you have a well water system, after the well tank. In some instances it may be near the hot water heater. The valve will have a tag marked “sprinkler control valve”. Turn the valve to the perpendicular position for “OFF” . If you still have a problem call Halloran & Yauch for service. (847)281-9400
